Skills

Programming Languages: Python, SQL, R

Technologies: Databricks, Git, Power BI, Excel, AWS, ETL, Data Modeling, Data Visualization & Storytelling

Education

School of Applied Mathematics, Fundação Getulio Vargas, B.S. in Data Science Feb 2021 – Jul 2025
and Artificial Intelligence

- **Math and Science Development Center Scholarship (FGV CDMC):** full scholarship program for students who have had excellent performance in academic Olympiads.

Experience

Grupo Salta Educação, Data Analyst May 2025 – Jul 2025

- Led the WhatsApp contact base optimization project, removing 7,300 inactive numbers, reducing message sends by 56% while maintaining the same response rate, achieving 30% lower monthly costs (-R\$24k).
- Automated financial and customer service reporting workflows, standardizing KPIs, improving data accuracy, consistency, and usability, while reducing manual reporting time for stakeholders.
- Conducted ad-hoc analyses and monthly performance reports using SQL, Databricks and Power BI Dashboards, presenting actionable insights for senior leadership to support data-driven decision-making.

Grupo Salta Educação, Data Intern Jun 2023 – Apr 2025

- Rebuilt the Operation Monitoring Dashboard in Power BI, consolidating 12+ data sources into a centralized, automated BI solution with hourly update and Slack integration. Enabled supervisors to track key KPIs in near real time across all customer service channels.
- Developed a Automated Dialer Audit Dashboard, updated every 30 minutes and integrated with Slack, detecting anomalies (e.g., rising abandonment rate, 0-second calls) and improving monitoring response time.
- Maintained and optimized recurring weekly and monthly reports in Excel and Power BI (e.g., Debtors Base Funnel).

FGV Jr. Consulting and Finance, Digital Development Consultant Oct 2022 – Jul 2023

- Built interactive dashboards using Python (Dash by Plotly), standardized project documentation, and applied agile methodologies to manage deadlines and deliverables, ensuring greater project efficiency and quality.

Projects

Promoting Electoral Transparency: Visual Analysis of Brazilian Electoral Data May 2024 – Dec 2024

- Built an interactive Power BI dashboard analyzing Brazilian electoral data stored on AWS (Athena, S3). Conducted data cleaning, transformation, and wrangling to create clear visualizations on candidate profiles, female participation, and vote distribution, supporting transparency and public analysis.

Field Project: Em Busca do Ouro Olímpico, FGV, CBVela Aug 2023 – Nov 2023

- Partnered with the Brazilian Sailing Confederation (CBVela) to develop an athlete ranking system, consolidating 130k+ competition records across 10 categories and 3,170 competitors (2015–2023).
- Built data collection and standardization pipelines (web scraping, OCR, APIs, NLP) and tested ranking models (Elo Rating, Keener's Method), delivering a unified database and validated predictive rankings that provided strategic insights for performance analysis and Olympic preparation.
